Thank you for purchasing another fine Trim Parts brand item. We know you will find your purchase in excellent condition and of the highest quality. We individually inspect and hand package each item to insure you receive only the finest restoration parts available for your classic.

In the installation of many Trim Parts items, the tightening of fasteners is required. Be sure your item is applied correctly and flush, then tighten your fastener slowly, alternating back and forth between the studs. **DO NOT OVER TIGHTEN!**

Keeping your classic clean and shiny is always a challenge. To ease this painstaking chore, we suggest applying a good coat of wax and/or polish to all the chrome plated surfaces (on the front and back) prior to installation.

The entire staff at Trim Parts, Inc., wants to thank you for choosing Trim Parts - the highest quality reproductions available. Please contact us or one of our many Trim Parts dealers worldwide with all your trim item needs.
