

Caution: keep small children away from the shields due to the heat and small cut outs that little fingers can get inserted into. While this product will greatly reduce the heat a side pipe generates, there is no guarantee implied or otherwise that some heat transfer may occur. Steel shields Ltd. assumes no liability for product performance or mishap and shall be held harmless for accidental injury caused by its product."

These personalized heat shields are made of Mirror finished 304, stainless steel and are not chrome plated so they will not rust or peel. For cleaning, just wash and if you like apply normal auto polish but that is up to you.

To clamp these personalized heat shields to your side pipes use the stainless steel clamps provided with the shields. You can hide the screw section by placing that section in the back side of the side pipes. Also to keep the clamps from damaging your side pipes we have included two folded heat resistant material to be placed between the clamps and the pipes.

Note that the folded strips should not be cut to make them thinner as the material will unravel plus the double thickness will help protect your pipes. There are small staples to hold the strips in place you might want to remove the staples when you are ready to install.
